

START

GOAL

How to play:

Each player gets a different set of game pieces (2, 3, or 4 each). Use coins, buttons, beads, or other small items.

Players take turns placing their pieces on the numbered circles until all of the pieces are on the board.

Take turns rolling a pair of dice. Whatever total is rolled, the player with their piece in that row moves it one spot to the right.

The first player whose game piece reaches the star wins.

Which number do you think will win most often?

Is there a number that will *never* be rolled?
